

## **Residential Approach Standards**

All residential approaches must be flagged and notified to the RM of Wilton for inspection.

Upon inspection, if approval is given, the following standards will apply:

- Width            15 - 20 meters
- Side Slope      5:1
- Surfacing       1 ½ - 2" Crushed rock and gravel
- Culvert          500 mm
- Angle      The approach must be installed perpendicular (a 90 degree angle) to the road.
- Visibility        Ensure that a minimum line of sight of 300 metres

Proper compaction should be used in the construction of the approach. All existing and new approaches must have adequate gravel applied to them in order to prevent mud from tracking onto the RM roads. Gravel should be a minimum of 200 feet from the shoulder of the RM road.
